IT Infrasctructure Solutions

■ Hybrid Infrastructure

IT infrastructure design and environment made up of a mix of on-premises and cloud datacenter to help manage and monitor an enterprise's entire IT infrastructure. This is important as IT environments and requirements continue to become more complex.

IT Infrasctructure Solutions

■ Security Solution

Cyber Security is more complex and can say security is border less and can attack from anywhere and anyway. In Business Data and Human is an asset, when data in wrong hand, your business will evaporate in minute. IT Security is complex solution, when attacker found a security hole they will attack your business
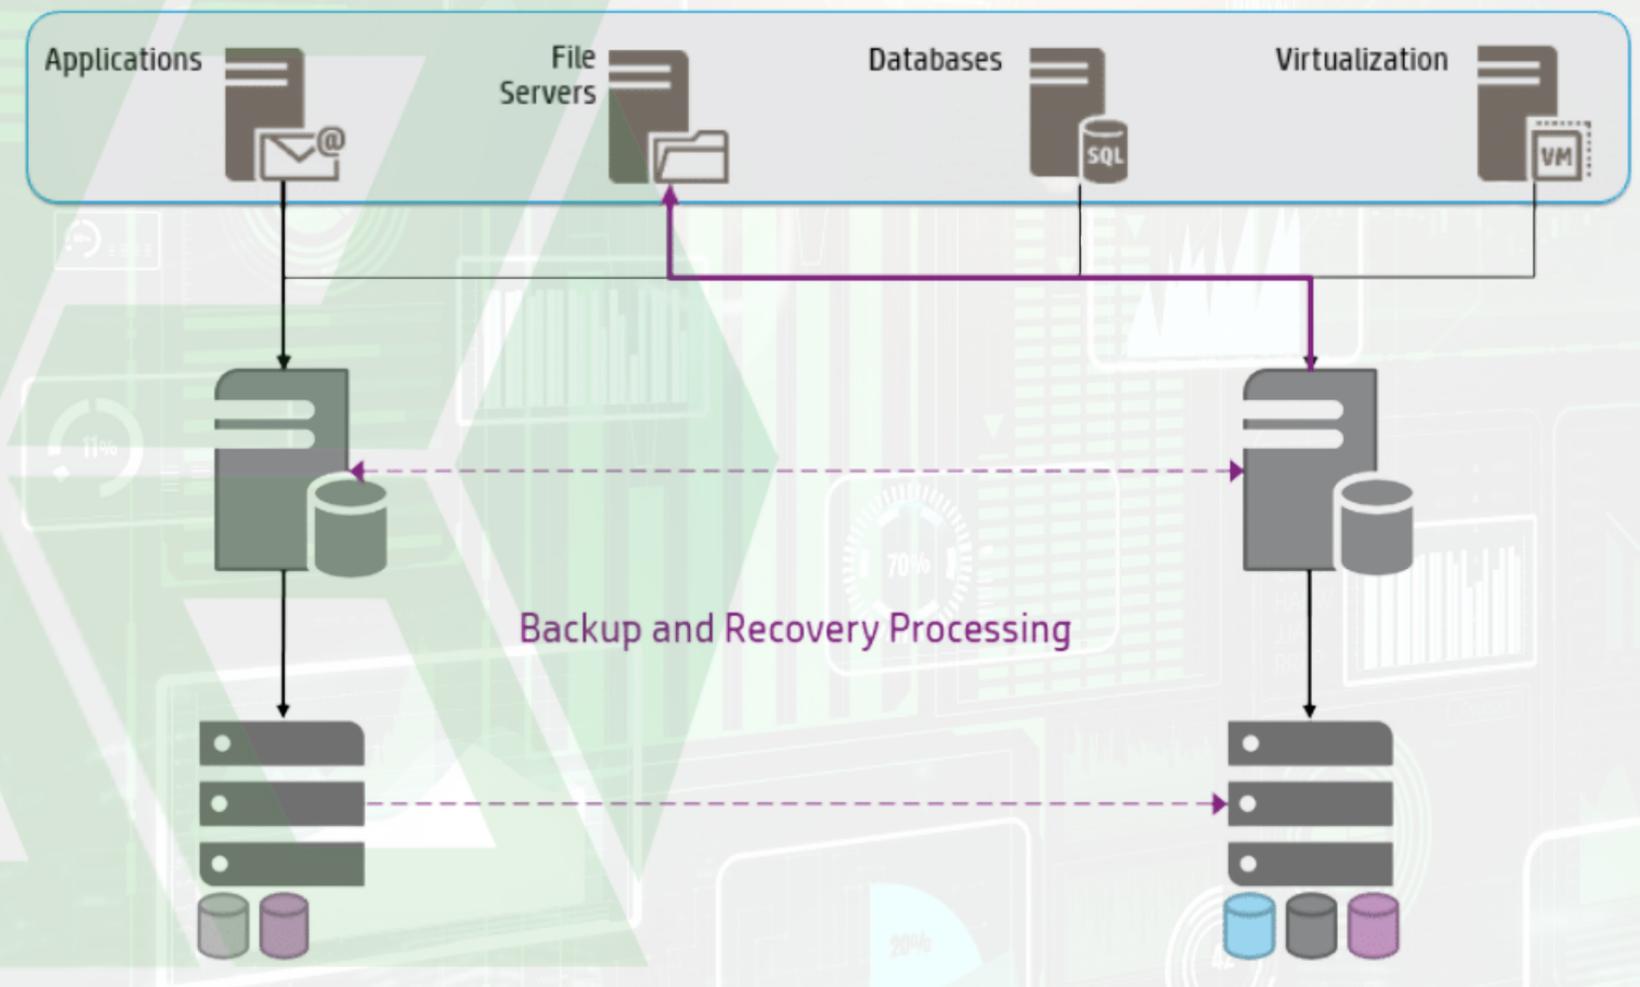

IT Infrasctructure Solutions

■ Backup and Recovery Solution

Backup and recovery describes the process of creating and storing copies of data that can be used to protect organizations against data loss. The purpose of the backup is to create a copy of data that can be recovered in the event of a primary data failure. Primary data failures can be the result of hardware or software failure, data corruption, or a human-caused event.

Applications   File Servers   Databases   Virtualization

Backup and Recovery Processing

■ Cloud Solution

Infrastructure as a service (IaaS)

Infrastructure as a service or IaaS is a form of cloud computing that provides virtual computing resources via the internet. IaaS delivers basic computing, network and storage resources to consumers on demand, this service is carried out over the internet and using a pay -as-you-go payment system.

IaaS allows you to use a server without the need to buy a computer and physical equipment so companies can save money because they don't need to buy special hardware.

Not only that, you also have full control over the infrastructure you have. You can still install, configure, and manage your own software.
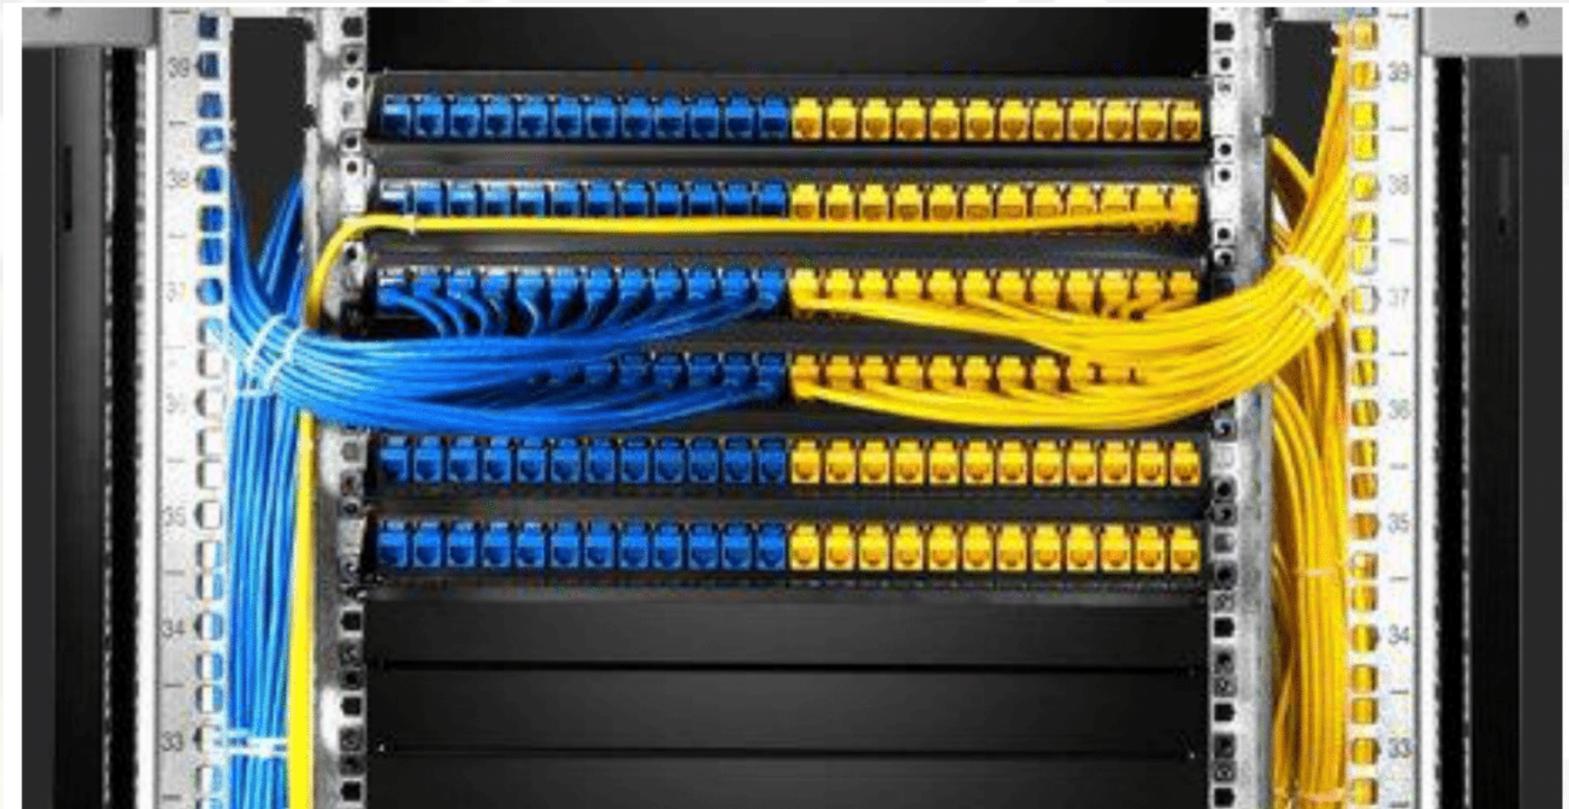

Cable Infrastructure Management
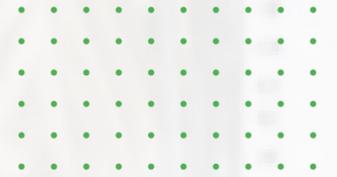

■ Structured Cabling

Structured cabling is the design and installation of a cabling system that will support multiple hardware uses and be suitable for today's needs and those of the future.

With a correctly installed system, current and future requirements can be met, and hardware that is added in the future will be supported.
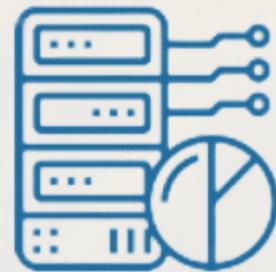

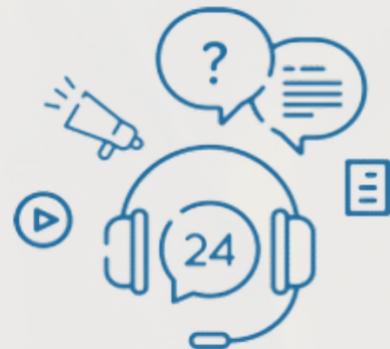

IT Managed Service Solution
